

UPDATE

What are Land and On-Water Management Plans? These Plans will guide how G-MW and other agencies manage activities, facilities and development on and around water storages. The Plans focus on cultural, recreational,

environmental and water quality management issues at water storages but are not designed to make recommendations on storage operations - such as water levels and releases. More about your favourite storage

fact sheets will provide information on the history and operation of each storage and will be available from our website and at the storage. If you have a photo or fascinating fact about your local water storage, let us know by emailing feedback@g-mwater.com.au

NEW - available online this month:
