

Dear Sir/Madam

Blue-Green Algae Warning for the No.1 Channel in the Torrumbarry Irrigation Area downstream of Greens Road including all spur channels

Goulburn-Murray Water has detected high blue-green algae levels in the No.1 Channel in the Torrumbarry Irrigation Area downstream of Greens Road (south-west of Cohuna). This includes all spur channels downstream of Greens Road.

Blue-green algae present a risk to the health of humans and animals. The algae detected are potentially toxic and may cause gastroenteritis if ingested. Characteristic signs of blue-green algae contact are skin rashes or itchiness; sore eyes, ears and nose; or if swallowed, nausea or vomiting.

The situation is being closely monitored and the following precautions are recommended:

- People and pets should avoid contact with the water.
- People who come into contact with affected water should wash affected skin immediately in clean cold water.
- Untreated water should never be used for human consumption (e.g. drinking, cooking, showering, bathing, washing).
- Boiling the affected water will not make it safe to use. Blue-green algae release toxins into the water when heated.
- Seek an alternative water supply for stock and pets where possible.
- Water can be used on gardens, however water should not be sprayed on vegetables and fruit.
- Stock should be kept away from recently irrigated areas for at least 7 days.

You can determine if the warning is still current by visiting the GMW website <https://www.g-mwater.com.au/water-operations/bga> or by ringing 1800 013 357.

Further information on blue-green algae can also be found on the GMW and Agriculture Victoria websites (<https://agriculture.vic.gov.au/farm-management/water/blue-green-algae-in-water/bluegreen-algae-and-irrigation-water>)

Please remember that water supplied by GMW is not suitable for human consumption without first being properly treated.

Yours sincerely

Greg Smith
WATER QUALITY MANAGER
